

where **creativity** meets **reality**

Design & Engineering

Manufacturing a Quality Product Starts with the Right Design.

We suggest you call us at the beginning of the process so we can help make your part designs as cost efficient and as easily moldable as possible.

- **We Find Problems Early**
We'll check for the general fit, function, and appearance of the part in relation to overall assemblies.
- **You Save Money**
Thorough preproduction work saves you money. That's because problems found at this stage cost much less to solve than after the molds are made—or worse yet, during production.

Rapid Prototyping

You'll Have Your Durable ABS Plastic Prototype in Just Days.

We make your prototype with our Stratasys Dimension 3D Printer.

Use your ABS plastic prototype to:

- **Prove Your Concept in the Design Phase**
- **Perform Functional Testing**
- **Drastically Reduce Product Costs**
- **Build Product Mockups**
- **Boost Sales as a Marketing Tool**

A Special Offer. First Prototype Free!

We'll refund the cost of one prototype model against your paid injection mold order.
